

Disorders Clinicians Who Use Our Technology Focus on Treating:

- Traumatic Brain Injury
- Post-Traumatic Stress Disorder
- Major Depressive Disorder
- Depression/Anxiety
- Persistent Post-Concussion Symptoms
- Emotional Instability
- Social Isolation
- Aggression/Anger
- Sensory Hypersensitivity
- Sleep Disorders
- Substance/Opioid Addiction
- Autism Spectrum Disorder
- Performance Optimization
- Slow information processing and lack of focus

Notable Facts

Wave Neuro's treatment methods are:

- Non-pharmacological
- Non-invasive
- Extensively personalized treatment
- FDA-cleared methods and technologies
- Low or no side effects for most individuals

Your Braincare™ journey starts with understanding your unique brain.

It all starts with a 10-minute brainwave recording to create your personalized Braincare™ plan

Begin Your Personalized Path to a Healthy Brain Today.

Wave Neuroscience technologies empower you to understand your unique brain and the opportunity to improve it without pharmaceuticals or invasive procedures.

This understanding combined with our decades of medical research provides the foundation of our target of advancing healthcare.

We combine decades of medical research with targeted methodologies to create greater access to better healthcare. Wave Neuro's proprietary technology **records, analyzes, informs and empowers individuals** and clinicians to improve brain function with the most efficacious means available.

Historically, brain health and mental disorders were treated with pharmaceuticals and talk therapy. Today, Wave Neuro has the capability to objectively assess brain disruption and effectively treat it using personalized neuromodulation.

How it works

Step 1: Identify

We measure biorhythms that include your current brain activity, heart rate, and heart rate variability.

Step 2: Understand

Review your report with a trained clinician. From there we determine customized settings to individualize brain treatment.

Step 3: Improve/Optimize

Relax and receive treatment: MeRT in-clinic 45 minutes a day for 30-45 days or SONAL™ for 30 minutes a day for 30 days. After your dedicated sessions, we take another brainwave recording to compare your brainwave activity to its baseline recording.

*MeRT is treatment at the supervision of a clinician, Sonal is a performance and wellness device.

We Believe Achieving Your Optimal Neural State Allows You to Live Your Best Life.

Wave Neuroscience's patented individualized approach to neuromodulation is focused on **wave form and harmony**, not brute force like others. Because of this, great outcomes can be achieved while delivering less energy to the patient. Less energy translates to safer treatments and less potential side effects.
